1.1 GENERAL

The Toshiba T1600 is one of the lightest portable computers available offering high technology, high speed, excellent legibility, IBM PC AT compatibility and battery machine. The T1600's operating system is used the MS-DOS version 3.30 and a powerful 80C286-12 microprocessor which has 16-bit data width on the data bus line. The memory capacity is one megabyte as standard. The system can be add one or two 2megabyte memory cards, thus the system can be had up to 5 megabytes of RAM. The internal 3.5-inch HDD (hard disk drive) has capacity of 20 megabytes. The internal 3.5-inch FDD (floppy disk drive) supports 1.44-megabyte 2HD (double-sided, high-density, double-track) and 720-kilobyte 2DD (double-sided, double-density, double-track) disks. The keyboard is compatible with IBM enhanced keyboard which has 86 or 88 keys. A backlit LCD (liquid crystal display) comes with your T1600. It can be replace this display with optional light reflecting LCD. The screen supports 640 by 400 pixels with TEGA (Toshiba enhanced graphics adapter) graphics and a 16-level gray scale. The power supply system is composed of AC adapter, batteries, and one board which has two microprocessor. The T1600 provides connecting ports with the optional devices at the rear panel of the system. There are one external drive port, one parallel printer port, two serial ports, one RGB port, and one keypad port. Also, it provides the expansion slot for Toshiba-size card.

Figure 1-1 T1600 System Unit

MODEL:T1600 Backlit

Page 1-2

1.2 SYSTEM UNIT

Page 1-3

The T1600 has CPU board, system board, and memory board in the system which are composed of the following components:

CPU board

* Central processing unit : CPU (80C286-12)

The CPU is a 16-bit microprocessor operated at 12MHz or 6MHz clock speed.

* Numeric data processor socket : NDP (80C287)

T1600 provides the 40-pin socket (DIP type) for

NDP.

* Gate arrays :

The following gate arrays are mounted in the CPU board.

- * Address driver gate array : ADDRV-GA (100 pin)
- * Memory controller gate array : MEMC-GA (100 pin)

System board

* Supper Integration : SI (U9778)

The SI is stored the following components:
Direct Memory Access x2: DMA (82C37)
Programmable interrupt controller x2: PIC
(82C59)

Timer x1 : TIM (82C54)

Floppy disk controller xl : (TC8565)

Universal acyncronus receive transmitter : UART (TC8570)

* Variable frequency oscillator: VFO (TC8568AF)

The VFO chip is used for FDD control logic.

* Real time clock: RTC (146818AF)

The RTC has memory in this chip which keeps the date, time and system configuration by RTC battery.

- * Asynchronus communication element : ACE (U80C5F)
- * Keyboard controller: KBC (80C42 and 80C50)

Page 1-4

* Memories :

Backup RAM: 32 Kbytes

This backup RAM is stored the data of the resume feature.

BIOS ROM: 96 Kbytes

This BIOS ROM is programed system BIOS and AGS BIOS programs

Video RAM: 256 Kbytes

* Gate arrays :

Bus controller gate array: BUSC-GA (100 pin)
Bus driver gate array: BUSD-GA (100 pin)
I/O decorder gate array: IODEC-GA (48 pin)
Display controller gate array: DISC-GA (144 pin)

Memory board

This memory board is mounted the 1 Mbyte of RAM which are used such as working memory, Hard RAM, Virtual

disk.

MODEL:T1600 Backlit

Page 1-5

1.3 3.5-INCH FLOPPY DISK DRIVE

The 3.5-inch internal FDD (floppy disk drive) is a high performance, reliable, and thin drive that supports 720- kbyte (formatted) 2DD and 1.44-Mbyte (formatted) 3.5-inch floppy disk. The FDD is shown in figure 1-3 and its specifications are described in table 1-1.

Figure 1-3 3.5-inch FDD

Table 1-13.5-inch FDD Specifications

ITEM		SPECIFIC	
Storage Capacity	(Kbytes)	2-Mbyte mode	1-Mbyte mode
Unformatted	(IDyces)	2,000	1,000
Formatted		1,440	720
Number of Heads		2	2
Number of Cylinders		80	80
Access Time	(ms)		
1 Track Access		3	3

Jumper straps

The hard disk drive has three jumper straps which are located on the hard disk control board.

Table 1-3 HDD Jumper Strap Status

Type	E5	E6	E7
Single drive	Short	Open	Short
Two drive, master	Open	Short	Short
Two drive, slave	Open	Short	Open

MODEL:T1600 Backlit

1.5 KEYBOARD

The 86 or 88-keyboard is mounted on the system unit. The 86-key is for USA version and 88-key is for Europe version. The keyboard is a key-matrix with one of the 86 or 88 keys at each vertex.

The keyboard is connected to the keyboard controller on the system board through a 22-pin flat cable. The keyboard layout of the U.K. version is shown in figure 1-5. Other keyboard layout is described in appendix C.

Figure 1-5 Keyboard

MODEL:T1600 Backlit

Page 1-9

1.6 BACKLIT LIQUID CRYSTAL DISPLAY

The backlit liquid crystal display (LCD) is composed of a LCD module, EL panel and EL power supply board. The backlit LCD is an LCD illuminated from the rear. Thus, the you can read its clear display even in poor light condition. It receives vertical and horizontal synchronizing signals, four bit data signals, and shift clock for data transmission. All signals are TTL level compatible. The specifications are described in table 1-4.

The backlit LCD has 16-level of gray scale and the display quality can be adjusted by contrast and brightness controls. The backlit LCD is shown in figure 1-6.

Figure 1-6 Backlit LCD

Contrast		Approx. $1:4$

MODEL:T1600 Backlit

1.7 POWER SUPPLY BOARD

The power supply board supplies dc 5, 12, -22, and -9 volts to all the components in the system.

It is an intelligent power supply using two microprocessors and it contains the following functions.

- More accurate low battery detection.
- 2. Calculations of remaining battery capacity.
- Over charge protection for battery. 3.
- Over voltage and over current protection for DC outputs. 4.
- Over voltage protection for DC input from AC adapter. 5.
- Control of DC output reguration

Output rating is as following table.

Figure 1-7 Power Supply Board

Table 1-5 Power Supply Board Output Rating

		REGULATION	MAX.
FUNCTION	DC VOLTAGE	TOLERANCE(%)	CURRENT
System logic, FDD			
HDC, HDD	+5	+-5	1850mA
HDD logic	+5	+-5	350mA
Backup RAM	+5	+-5	200mA
LCD VEE	-22	+-5	10mA
RS232C, Modem, IO-slot	+12	+-10	40mA
RS232C, Modem, IO-slot	-9	+-10	40mA
Backlit EL	+12	+-10	400mA

MODEL:T1600 Backlit

Page 2-1

2.1 GENERAL

The problem isolation procedures described in part 2 are used to isolate defective FRUs (field replaceable units). The FRUs covered are:

- 1. Power supply unit
- 2. System board
- 3. CPU board
- 4. Memory board

- 5. FDD 6. HDD 7. Keyboard
- 8. Display

Detailed replacement procedures instructions are described in part 4 and test program operations are described in part 3.

The following items are necessary for implementing the

problem isolation procedures.

- 1. T1600 diagnostics disk
- 2. Phillips head screwdriver
- 3. Work disk (for FDD testing)
- 4. Cleaning disk kit (for FDD testing)
- Printer port LED
 RS-232-C, printer wraparound connectors

The problem isolation flowchart described in section 2.2 can be used to determine which isolation procedures are necessary to isolate a T1600 problem.

MODEL:T1600 Backlit

Page 2-2

2.2 PROBLEM ISOLATION FLOWCHART

The flowchart in figure 2-1 is used as a guide for determining which FRU is defective. Please confirm the followings before performing the flowchart procedures.

- 1. No disk is in the FDD.
- 2. All optional equipments are disconnected.
- 3. MS-DOS has been installed in drive C before a trouble happens.

Page 2-2

Figure 2-1 Problem Isolation Flowchart

Page 2-3

Figure 2-1 (cont.) Problem Isolation Flowchart

If the diagnostics program cannot detect any error, it may be an intermittent error. Running test is required to check a computer for a while.

Page 2-4

- 1. If an error is detected on the system test, memory test, display test, ASYNC test, printer test, or real timer test, perform the system board isolation procedures in section 2.4.
- 2. If an error is detected on the hard disk test, perform the HDD problem isolation procedures in section 2.6.
- 3. If an error is detected on the keyboard test, perform the keyboard problem isolation procedures in section 2.7.
- 4. If an error is detected on the floppy disk test,

perform the FDD problem isolation procedures in section 2.5.

MODEL:T1600 Backlit

Page 2-5

2.3 POWER SUPPLY PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the power supply board is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1 DC IN indicator check

PROCEDURE 2 Connector check

PROCEDURE 1 DC IN indicator check

This indicator lights red if power is supplied from AC adapter to the T1600 when you connect the AC adapter's to T1600 and a wall outlet. If the AC adapter's output voltage is abnormal or the power supply board malfunctions, the indicator labeled "DC IN" flashes red.

If the DC IN indicator flashes red or does not glow when connecting the AC adapter to the computer, check the following items.

- Check 1 Unplug the AC adapter from the wall outlet and the computer, then remove the both battery packs.

 Plug the AC adapter into the computer, then the wall outlet and power on the computer.

 If still its phenomenon remains, perform the check 2.
- Check 2 The AC adapter may be damaged. Replace a new AC adapter. If still its phenomenon remains, perform the PROCEDURE 2.

Page 2-6

PROCEDURE 2 Connector check

The power supply board is connected to the other unit by some cables. These cables may be disconnected from the power supply board. Disassemble the T1600 system unit for checking these cables. Disassemble procedures is described in part 4.

- Check 1 Check that the following cables are connected to power supply board correctly.
 - o Bus interface connector ----> PJ2
 - o Two main battery connector ----> PJ3, PJ4

NOTE: One connector having red cables have to connect to the PJ4 labeled "RED" on the power supply board.

o Sub battery connector ----> PJ5 o DC IN indicator connector ----> PJ6

If these cables are disconnected, connect them. Try again the normal operation. If the phenomenon remains, perform the check 2.

Check 2 The power supply board may be damaged. Replace a new power supply board. If still its phenomenon remains, the other unit may be damaged.

MODEL:T1600 Backlit

Page 2-7

2.4 SYSTEM/CPU/MEMORY BOARD PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the system board is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Message check

PROCEDURE 2: Printer port LED check

PROCEDURE 3: Test program check

PROCEDURE 1
Message check

After power on, the system performs initial reliability test (IRT) which program is stored in BIOS ROM on the system board. If the error message appears, perform the check 1. If no displayed on the screen, perform the PROCEDURE 2

Check 1 If the following error message appears on the screen, press any key. This program confirms the current system configuration and the configuration stored to RTC memory. If it is different, the following message will appear. You can easily set the current configuration in the RTC memory by pressing any key. If another error message appears, perform check 2.

*** Error in CMOS. Bad Battery ***
Check system. Then press any key

*** Error in CMOS. Bad check sum ***
Check system. Then press any key

*** Error in CMOS. Bad memory configuration *** Check system. Then press any key

*** Error in CMOS. Bad time function *** Check system. Then press any key

Check 2 If the following message appears, press any key. At this time the resumed data will be erased. If another error message appears, perform check 3.

WARNING: RESUME FAILURE.
PRESS ANY KEY TO CONTINUE.

Page 2-8

Check 3 The IRT program tests the CPU board, memory board, and system board. If an error occurs on the IRT program, the error message appears on the screen. If the following error message or none appears, perform PROCEDURE 3.

ERROR INTERRUPT CONTROLLER #1
ERROR INTERRUPT CONTROLLER #2

MEMORY VERIFY ERROR AT XXXX:XXXX FOUND XXXX EXPECTED XXXX

ERROR INTERRUPTS AND STUCK NMI

ERROR PROTECT MODE

ERROR PROCESSOR EXCEPTIONAL INTERRUPT

If the following message appears on the screen, perform the FDD problem isolation procedures.

*** FDD A is not installed ***

Page 2-9

PROCEDURE 2
Printer port LED check

The printer port LED informs the IRT program status and error status as a hexadecimal value after power on the system. Connect the printer port LED to the printer port. After power on, read the LED status from left to right. If the final LED status is AAH, perform the PROCEDURE 3. If the final LED status matches any of the error status code or normal status code value in the table 2-1, replace the CPU board, memory board, or system board as indicated as follows.

- 1. If one of the 81H, 87H, A3H, or A6H is indicated on the printer port LED, replace the CPU board. If the error code still appears, system board or memory board may be damaged.
- 2. If one of the 95H, 9FH, or A5H is indicated on the

printer port LED, replace the memory board. If the error code still appears, system board or CPU board may be damaged.

3. If an error code other than the above is indicated on the printer port LED, replace the system board. If the error code still appears, CPU board or memory board may be damaged.

Table 2-1 Normal Status and Error Status of the Printer Port LED

Normal status	Error status	Meaning	Process
01н	81H	CPU test 1 (flag test)	halt
02Н	82H	KBIC IBF/OBF test, Video initialization	halt

ERROR PROCESSOR EXCEPTIONAL INTERRUPT message appears.

NOTE: If the error occurs on the 19H to 24H normal status, printer port LED status does not halt. Error message remains on the screen, and when the IRT program is finnished, these error messages are disappeared.

Page 2-12

PROCEDURE 3

Test program check

The test program has several programs for testing the system board, memory board, and CPU board which is stored in T1600 diagnostics disk. Perform the following test. Detail operation is described in part 3.

> System test Memory test Display test Printer test ASYNC test Real timer test

If an error is detected during the above tests, replace the CPU board, memory board, or system board as indicated as

follows.

- 1. If an error is detected during the system test, replace the system board. If still the error is detected, system board or memory board may be damaged.
- 2. If an error is detected during the memory test, replace the memory test. If still the error is detected, system board or CPU board may be damaged.
- 3. If an error is detected during the display, printer, ASYNC, or real timer test, replace the system board. If still the error is detected, CPU board or memory board may be damaged.

MODEL:T1600 Backlit

Page 2-13

2.5 FLOPPY DISK DRIVE PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the floppy disk drive is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Format check

PROCEDURE 2: Test program check

PROCEDURE 3: Connector check

PROCEDURE 1 Format check

Prepare the new floppy disk, the format it using MS-DOS FORMAT command. If the floppy disk is not formated, check the following items.

Check 1 Check that the FDD indicator lights. If it does not light, perform the PROCEDURE 3. If it lights,

perform check 2.

Check 2 Check that the MS-DOS FORMAT command is used correctly.

When media type is 2DD, use the FORMAT/3 command. When media type is 2HD, use the FORMAT command. If FORMAT command is used correctly, perform the check 3. If FORMAT command is not used correctly, try again. If still the phenomenon remains, perform

the check 3.

Check 3 Perform the head cleaning by cleaning kit of the

3.5-inch FDD. If still remains, perform the

PROCEDURE 2.

PROCEDURE 2

Test program check

The FDD test program is stored the T1600 diagnostics disk. After run the MS-DOS using hard disk, load the diagnostic program. Detail operation is described in part 3. Prepare the formatted floppy disk, then perform the \mbox{FDD} test. The error code and status is described in table 2-2. If the error occurs, perform the check 1.

Table 2-2 FDD Error code and Status

CODE 01 02 03 04 06 08 09 10 20 40 60 80	STATUS Bad Command Address Mark Not Found Write Protected Record Not Found Media Removed On Dual Attach Card DMA Overrun Error DMA Boundary Error CRC Error FDC Error Seek Error FDD Not Drive Time Out Error (Not Ready)
EE	Write Buffer Error
Check 1	If the "Write protected" message appears, remove the write protect by moving the write protect tab. If the another error message appear, perform the check 2.
Check 2	Check that the floppy disk is formatted correctly.

If it correctly, perform the PROCEDURE 3.

Page 2-15

PROCEDURE 3 Connector check

The FDD is connected to the system board by one cable. Disassemble the system unit for checking the FDD cable. Detail procedures is described in part 4. If it is not connected, connect it to the system board. If it is connected to the system board correctly, performs check 1.

o FDD I/F connector ----- > PJ5

Check 1 The FDD may be damaged. Replace the FDD to a new FDD, then check the PROCEDURE 1 and 2. If still the error occurs, the system board (floppy disk controller or other controller) may be defective. Replace the system board.

Page 2-16

2.6 HARD DISK DRIVE PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the hard disk drive is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Logical format check

PROCEDURE 2: Test program check

PROCEDURE 3: Connector check

CAUTION: The contents of the hard disk will be erased when perform the HDD problem isolation procedures. Before performing isolation, transfer the contents of the hard disk to floppy disks. This can be done with the MS-DOS BACKUP command. (See the MS-DOS manual for details.)

PROCEDURE 1
Logical format check

Using the MS-DOS system disk, make partition of the hard disk by entering the FDISK command, then format the hard disk by entering the FORMAT command. At this time use/s switch to transfer the system program.

If normal operation is restored, the HDD is normal. If normal operation is not restored, perform the PROCEDURE 2.

Page 2-17

PROCEDURE 2 Test program check

The HDD test program is stored in T1600 Diagnostics disk. Perform the all HDD test. Detail operation is described in part 3. If the error is detected during the HDD test, an error code and status will be displayed; perform the PROCEDURE 3. The error code and status are described in table 2-3 If no error is generated, HDD is normal.

Table 2-3 HDD Error Status

CODE	STATUS
01	Bad command error
02	Bad address mark
04	Record not found
05	HDC not reset
07	Drive not initialize
09	DMAboundary error
0A	Bad sector error
0B	Bad sector error
10	ECC error
11	ECC recover enable
20	HDC error

40	Seek error	
80	Time out error	
AA	Drive not ready	
BB	Undefined	
CC	Write fault	
ΕO	Status error	
F0	Not sense error (HW.	code=FF)

Page 2-18

PROCEDURE 3 Connector check

The HDD is connected to the HDD adapter board by two connectors which are power connector and signal connector. The signal cable is connected to the system board through the HDD adapter board. Disassemble the system unit for checking the HDD cables. Detail procedures is described in part 4. If it is not connected, connect them to the system board. If it is connected to the system board correctly, perform check 1.

Check 1 The HDC has jumper which is located bottom side of the HDD. Check that the jumper status is correctly. The correct jumper setting is described as follows. E5 > short

E6 > open

If the jumper setting is not correctly, set the jumper to correct setting. If the jumper setting is correctly, perform the check 2.

The HDD and HDC may be damaged. Replace the Check 2 HDD

unit to a new HDD unit, then check the

PROCEDURE 1 and 2. If still the error occurs, perform the

check 3.

Check 3 The HDD adapter board may be damaged. Replace the

> HDD adapter board to a new HDD adapter board. If still the error occurs, system board may be

damaged.

MODEL:T1600 Backlit

Page 2-19

This section describes how to determine whether or not the keyboard is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Test program check

PROCEDURE 2: Connector check

PROCEDURE 1

Test program check

The keyboard test program is stored in T1600 diagnostics disk. Perform the test program. Details operation is described in part 3. If the error occurs, perform the PROCEDURE 2. If the error does not occur, the keyboard is normal.

PROCEDURE 2 Connector check

The keyboard is connected to the system board by one 22-pin flat cable. Disassemble the system unit for checking the keyboard cable. Detail procedures is described in part 4. If it is not connected, connect it. If it connected correctly, check 1.

o Keyboard I/F connector ----> PJ1

Check 1

The keyboard may be damaged. Replace the keyboard to a new keyboard, then check the PROCEDURE 1. If still error occurs, the keyboard controller on the system board may be damaged

MODEL:T1600 Backlit

Page 2-20

2.8 DISPLAY PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the DISPLAY is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Brightness and contrast volume check

PROCEDURE 2: Test program check

PROCEDURE 3: Connector check

PROCEDURE 4: Replacement check

PROCEDURE 1

Brightness and contrast volume check

The system has brightness and contrast dials on the display. Using the two dials to fine tune the display screen to your satisfaction. If the brightness does not change, EL element may be lifetime. Replace the EL panel. If the character light does not change, perform the PROCEDURE 2. If brightness and contrast of the display change, perform the PROCEDURE 2.

PROCEDURE 2
Test program check

Using T1600 diagnostics disk, perform the display test. The display test checks the display controller on the system board. If the error is detected, perform the PROCEDURE 3. If the error is not detected, the display is normal.

PROCEDURE 3
Connector check

The display unit has LCD module, EL power supply board, and volume board. The LCD module are connected to the EL power supply board, volume board, and system board by connector. Disassemble the display unit for checking these connector. Detail procedures are described in part 4. If these connector are not connected, connect them. If these connector are connected, perform the PROCEDURE 4.

PROCEDURE 4
Replacement check

Replace the EL power supply board, then perform the normal operation. If still the phenomenon remains, replace the LCD module. If still the phenomenon remains, system board may be damaged.

MODEL:T1600 Backlit

Page 3-1

3.1 GENERAL

This part explains test and diagnostics programs. That checks the functions of all hardware modules of the T1600.

There are 17 programs grouped into two modules: the service program module (DIAGNOSTICS MENU) and test program module (DIAGNOSTIC TEST MENU).

The service program module is composed of 6 tasks:

- 1. HARD DISK FORMAT
- 2. HEAD CLEANING
- 3. LOG UTILITIES
- 4. RUNNING TEST
- 5. FDD UTILITIES
- 6. SYSTEM CONFIGURATION

The test program module is composed of 11 tests:

- 1. SYSTEM TEST
- 2. MEMORY TEST
- 3. KEYBOARD TEST
- 4. DISPLAY TEST
- 5. FLOPPY DISK TEST
- 6. PRINTER TEST
- 7. ASYNC TEST
- 8. HARD DISK TEST
- 9. REAL TIMER TEST
- 10. NDP TEST
- 11. EXPANSION TEST

The following items are necessary for carrying out the test and diagnostic programs.

- 1. T1600 diagnostics disk
- 2. MS-DOS system disk
- 3. Formatted work disk (For FDD test)
- 4. Cleaning disk kit (For read cleaning)
- Printer wraparound connector (For printer wraparound test)
- 6. RS-232-C wraparound connector (For ASYNC wraparound test)

Service personnel can use these programs to isolate problems by selecting the appropriate program and operation procedures described in section 3.2.

MODEL:T1600 Backlit

Page 3-2

3.2 OPERATIONS

- 1. After run the MS-DOS, insert the diagnostics disk in the floppy disk drive.
- 2. Type in TESTCE16, then press Enter.
- 3. The following display will appear:

TOSHIBA personal computer T1600 DIAGNOSTICS Version X.XX (C) copyright TOSHIBA Corp. 1988

DIAGNOSTICS MENU:

- I DIAGNOSTIC TEST
- 2 HARD DISK FORMAT
- 3 -
- 4 HEAD CLEANING
- 5 LOG UTILITIES
- 6 RUNNING TEST
- 7 FDD UTILITIES
- 8 SYSTEM CONFIGURATION

9 - EXIT TO MS-DOS

PRESS [1] - [9] KEY

Detailed explanations of the service programs and the operations are given in section 3.17 to 3.24.

NOTE: To stop the test program:

- (1) During keyboard operation, press Ctrl + C
- (2) While running the test program, press Ctrl + Break

Page 3-3

4. Type in 1, then press Enter and the following display will appear:

TOSHIBA personal computer T1600 DIAGNOSTICS version X.XX (C) copyright TOSHIBA Corp. 1988 DIAGNOSTIC TEST MENU:

- 1 SYSTEM TEST
- 2 MEMORY TEST
- 3 KEYBOARD TEST
- 4 DISPLAY TEST
- 5 FLOPPY DISK TEST
- 6 PRINTER TEST
- 7 ASYNC TEST
- 8 HARD DISK TEST
- 9 REAL TIMER TEST
- 10 NDP TEST
- 11 EXPANSION TEST
- 88 FDD & HDD ERROR RETRY COUNT SET
- 99 EXIT TO DIAGNOSTICS MENU

PRESS [1] - [9] KEY

3.8 and 3.11.

Numbers, 1 to 11 are diagnostic tests.

Number 88 is for setting the floppy disk drive and hard disk drive error retry count.

Number 99 is for returning to the DIAGNOSTIC MENU.

When selecting the floppy disk test or hard disk test, special sub-messages will appear, as described in sections

5. After typing in a test number (1 to 11) of the DIAGNOSTIC TEST MENU, pressing Enter displays as follows:

TEST NAME XXXXXXX

SUB TEST : XX ERROR COUNT : XXXXX
PASS COUNT : XXXXX
WRITE DATA : XX STATUS : XXX

ADDRESS : XXXXXX

SUB-TESTMENU:

01 - ROM CHECKSUM

02 - HW status

99 - Exit to DIAGNOSTIC TEST MENU

SELECT SUB-TEST NUMBER ?

The screen shown above, for example, appears when you type ${\bf 1}$ and ${\bf Enter.}$

Page 3-4

6. Select a subtest. Type in the subtest number, then press Enter. The following message will appear:

TEST LOOP (I:YES/2:NO) ?

NOTE: If you select KEYBOARD TEST, this message will not appear.

If you select YES (by typing in 1, then pressing Enter): Each time a test cycle ends, it increments the pass counter by one and repeats the test cycle.

If you select NO (by typing in 2, then pressing Enter):

At the end of a test cycle, the test execution is terminated

7. Type in $\,$ i or 2, then press Enter. The following message will

appear:

and you exit to the subtest menu.

ERROR STOP (i:YES/2:NO) ?

If you select YES (by typing in 1, then pressing Enter): When an error occurs, the error status is displayed and execution of the test program stops and the operation guide is displayed on the right side of the display screen. If you select NO (by typing in 2, then pressing Enter): When an error occurs, the error status is displayed then the error counter is incremented by one and you go to the next test

- 8. Type in I or 2, then press Enter and the test program will run. Each subtest is described in section 3.3.
- 9. When an error occurs during the test program, the following message will appear: (if you answer YES for ERROR STOP question,)

ERROR STATUS NAME

- [[HALT OPERATION]]
 - 1: Test End
 - 2: Continue
 - 3: Retry
- 1: Terminates the test program execution and exits to the subtest menu.
- 2: Continues the test.
- 3: Retries the test.

The error code and error status names are described in section 3.15.

MODEL:T1600 Backlit

3.3 SUBTEST NAMES

Table 3-1 lists the subtest of each test program.

TABLE 3-1 Subtest Names and Execution Time

3.4 SYSTEM TEST

Subtest 01 ROM checksum

This test performs the ROM checksum test on the system board.

(Test extent: F0000H - FFFFFH 64KB)

Subtest 02 H/W status

This test reads the system hardware status, then displays the status as shown below. Press Enter to return to the system test's SUB-TEST MENU. Table 3-2 describes the hardware status bits. If you want to return to the SYSTEM TEST menu, press Enter.

76543210 H/W status = 10101100

MODEL:T1600 Backlit

Page 3-8

3.5 MEMORY TEST

Subtest 01 RAM constant data (in real mode)

This subtest writes constant data to memory, then reads and compares it with the original data.

The constant data is "FFFFH," "AAAAH,"

"5555H","0101H," and "0000H."

Subtest 02 RAM address pattern data (in real mode)

This subtest creates an address pattern by XORing (Exclusive- ORing) the address segment and address offset, writes the address pattern into the segment address and the offset address, then reads and compares it with the original data.

Subtest 03 RAM refresh (in real mode)

This subtest writes 256 bytes of constant data to memory, then reads and compares it with the original data. The constant data is "AAAAH" and "5555H". There is a delay between the write and the read operations.

Subtest 04

Protected mode

This subtest writes fixed data and address data to memory (addresses 100000 H to the max.) in protected mode, then reads and compares it with the original data.

Subtest 05 Extended memory

For the memory located at the address 100000H or more, the test program writes data, reads it back, and compares in the microprocessor's protected mode. The data patterns used by the program are one address pattern and four constant (i.e. fixed) data patterns. Address pattern data is a data generated by some logical operation with its memory address information. Four constant data patterns are FFFFH, AAAAH, 5555H, and 0000H.

Subtest 06

Backup memory

This subtest writes constant data (FFFFH, AAAAH, 5555H, 0000H) to memory at addresses 0E8000H to 0EFFFFH, then reads and compares it with the original data.

Page 3-9

Subtest 07 RAM on BIOS

A register controlling the RAM on BIOS function is checked by a write/read/compare algorithm. And, the functions specified by the register are also verified. Then, the program compares the copied BIOS code in the RAM with the original code in the ROM.

Subtest 08 H-RAM

Registers controlling the Hard-RAM function is checked by a write/read/compare algorithm. And, the functions specified by the registers are also verified. Then, the program compares the copied BIOS code in the RAM with the original code in the ROM. Finally, the memory assigned as Hard-RAM is checked by a write/read/compare algorithm using a Hard-RAM window.

Subtest 09 LIM (in real mode)

Registers controlling the LIM-EMS are

checked. Page information is written at the beginning of each page to verify its paging function. Then, the memory assigned as LIM-EMS is checked by a write/read/compare algorithm using a LIM-EMS window.

MODEL:T1600 Backlit

Page 3-10

3.6 KEYBOARD TEST

Subtest 01 Pressed key display

NOTE: Make sure the Num-lock key is off. If this key is on, the test cannot be carried out. The Fn key is not subjected to the test.

When the keyboard layout (as shown below) is drawn on the display, press any key and check that the corresponding key on the screen is changed to the character "*"

When a key is held depressed, the display will blink designating the auto-repeat function.

KEYBOARD TEST IN PROGRESS 30100

IF TEST OK, PRESS [DEL] THEN [ENTER] KEY
Subtest 02 Pressed key code display

When a key is pressed, its scan code, character code, and key top name are displayed on the screen in the format shown below.

The Ins, Caps lock, Num lock, Scroll lock, Alt, Ctrl, Left Shift, and Right Shift keys are displayed in reverse screen when pressed. The scan codes, character codes and key top names are shown in table 3-3.

3.7 DISPLAY TEST

Subtest 01 VRAM read/write

This subtest writes constant data (FFFFH, AAAAH, 5555H, 0000H) and address data to video RAM (256 Kbytes), then reads the data written and compares it with the original data.

Subtest 02

Character attributes
This subtest checks:

Normal Display Intensified Display Reverse Display Blinking Display

For color displays, all seven colors used (blue, red, magenta, green, cyan, yellow, white) are displayed. The background and foreground colors can then be checked for brightness. The display below appears on the screen when this test is run.

Page 3-19

Subtest 03

Character set

In this subtest the character set of its code (00H to FFH) is displayed in the 40×25 character mode as shown below.

Page 3-20

Subtest 05

320*200 Graphics display

This subtest displays two of color sets for the color display in the 320*200 dots graphics mode (Mode 4 and D) as shown below.

3.8 FLOPPY DISK TEST

CAUTION: Before running the floppy disk test, prepare a formatted work disk and remove the diagnostics disk. Then insert the work disk into the FDD. Because the contents of the floppy disk will be erased.

OPERATION

1. When you select the floppy disk test of the DIAGNOSTIC TEST

MENU, the following message will appear under the

DIAGNOSTIC

TEST MENU.

Test drive number select (1:FDD1, 2:FDD2,0:FDD1&2)@

2. Select the test drive number, then press the Enter. The following message will appear.

Media in drive#1 mode (0:2DD, I:2D, 2:2D-2HD/2DD, 3:2HD) @

3. Select the media type of the floppy disk to be tested, then $press\ the\ Enter.\ The\ following\ message\ will\ appear.$

Test start track (Enter:0/dd:00-79) @

- 4. You can select the start track number of the floppy disk test.

 When pressing the Enter only, the start track number will be
 zero. If you desire, select the start track number. Then the subtest menu of the floppy disk test will appear.
- 5. During the floppy disk test, the message shown below will appear. The ADDRESS number indicates that the first XX shows

 a cylinder number, the third X shows a head number, and the

 last XX shows a sector number. The STATUS number indicates
 that the first X shows a drive number and the last XX shows
 an error status code.

FLOPPY DISK XXXXXXX

SUB-TEST : XX

PASS COUNT : XXXXX ERROR COUNT : XXXXX WRITE DATA : XX READ DATA : XX ADDRESS : XXXXXXX STATUS : XXX

Page 3-25

CONTENTS
Subtest 01

Sequential read

This test performs the CRC (cyclic redundancy check) with a continuous read operation of all tracks on a floppy disk.

2D (Double-sided, double-density): Track 0 to 39.

2DD (Double-sided, double-density, double-track) and 2HD (Double-sided, high-density, double-track): Track 0 to 79.

The start track can be specified at the previous stage.

Subtest 02 Sequential read/write

This test writes data to all tracks (as defined above) continuously and then reads the data out and compares it with the original data. (The data pattern is B5ADADH repeated.)

Subtest 03 Random address/data

This test writes random data to random address on all tracks (as defined in subtest 01) and then reads the data out and compares it with the original data.

Subtest 04 Write specified address

This test writes the specified data on the specified address that you enter from the keyboard. You can specify the test data, track

number, and head number.

Subtest 05 Read specified address

This subtest performs read operation on the specified address that you enter from the keyboard. You can specify the track number and head number.

MODEL:T1600 Backlit

Page 3-26

3.9 PRINTER TEST

CAUTION: A printer (IBM compatible) must be connected to the system in order to execute the test. Confirm that the A-B-PRT $\,$

switch is set to PRT position.

CONTENTS
Subtest 01

Ripple pattern

This subtest prints characters for code 20H through 7EH line by line while shifting one character to the right at the beginning of each new line.

PRINTER TEST

- 1. THIS LINES SHOWS NORMAL PRINT.
- 2. THIS LINE SHOWS DOUBLE WIDTH PRINT .
- 3. THIS LINE SMOWS COMPRESSED PRINT.
- 4. THIS LINE SHOWS EMPASIZED PRINT.
- 5. THIS LINE SNOWS DOUBLE STRIKE PRINT.
- 6. ALL CHARACTERS PRINT

Subtest 02

Function

This subtest prints out various print type as shown below.

Subtest 03 Wraparound

NOTE: A printer wraparound connector is necessary for executing this test. Wiring diagram of the printer wraparound connector is described in the part 3.25.

The data, control, and status lines will be checked with the printer wraparound connector.

Page 3-27

OPERATION

Subtest 01 and 02

 When you select the subtest 01 or 02, the following message will appear.

Select the channel number (1-3) ?

Select the printer channel number, then type in the number. The T1600 supports three printer channels.

2. After pressing the Enter, the subtest is executed.

Subtest 03

1. When you select this subtest, the following message will appear.

Select the channel number (1-3) @

Select the printer channel number, then type in the number. The T1600 supports three printer channels.

2. After pressing the Enter, this subtest is executed.

MODEL:T1600 Backlit

Page 3-28

3.10 ASYNC TEST

In subtest 01 to subtest 05, data transmission is done with the following format:

Speed: 9600 BPS

Data 8 bits and one parity bit (EVEN)

One stop bit

Data pattern: 20H to 7EH

Subtest 01 Wrap around (channel 1)

NOTE: The RS-232-C wraparound connector must be connected to channel 1 to execute this test. The wiring diagram of the RS-232-C wraparound connector is described in part 3.25.

A data send/receive test is performed with the wraparound connector for the channel 1.

Subtest 02 Wrap around (channel 2)

The same test as the subtest 01 is performed for the channel 2.

Subtest 03 Point to point (send)

NOTE: This subtest must be executed in condition

that two machines are connected with the RS-232-C direct cable and one side should be set as 'send' and the other set as 'receive'. The wiring

diagram

of the RS-232-C direct cable is described in part 3.25. The subtest 03 executed in one side and the subtest 04 executed in the other will check the communication capability as follows:

A block of data (20H to 7EH) is sent from one side to the other, and then returned back. The returned data is compared with the original one. This test is used to check whether the returned data are same as the original ones.

Subtest 04 Point to point (receive)

This subtest is used with the subtest 03 as described above.

Page 3-29

Subtest 05 300/1200 BPS card modem loopback

NOTE: If there is no modem card in the system, this test can no be executed.

This subtest is used to check whether the data to be sent from the modem card to the RS-232-C line is correct or not. This can be done with the loopback function inside the modem card.

Subtest 06 Card modem on-line test

NOTE: This test requires two machines which are connected to the PBX (Private Branch Exchange). One side is set as 'send' and the other set as 'receive'. When both sides are ready, you can start the test.

In this subtest, data are sent from the 'send' side to the 'receive' side through the PBX. This subtest is used to check whether data transmission through a telephone line is done properly or not.

Subtest 07 Dial tester test

NOTE: To execute this subtest, a dial tester must be connected to the system.

This subtest is carried out by sending the pulse dial and tone dial twice automatically.

[Pulse dial]: "1-2-3-4-5-6-7-8-9-0-1-2"
[Tone dial]: "1-2-3-4-5-6-7-8-9-*-0-#"

Subtest 08 Interrupt test (IRQ4, 3, 5)

This subtest genarates the interrupt request levels 4, 3, 5 in this order, then checks if this

function works correctly.

MODEL:T1600 Backlit

Page 3-30

3.11 HARD DISK TEST

CAUTION: The contents of the hard disk will be erased when subtest 02, 03, 04, 06, 08 or 09 is run. Before running the test, transfer the contents of the hard disk on the floppy disk. This can be done with the MS-DOS BACKUP command. After the test, enter the MS-DOS FDISK command, which will set the partition. Then enter the MS-DOS FORMAT command. (See the MS-DOS manual for details.)

OPERATION

1. When you select the hard disk test of the DIAGNOSTIC TEST MENU, the following message will appear.

Test drive number select (1:HDD, 2:HDD2,0:HDD1&2) ?

2. Select the drive number of the hard disk to be tested and press the Enter. The following message will appear.

HDC F/W error retry (1:yes,2:no) ?

3. This message is used to select whether to do retry operation

or not when the hard disk controller detects an error. Select yes or no and press the Enter. The following

message

will appear.

Data compare error dump (1:no,2:yes) ?

4. This message is used to select whether to do dump operation

or not when data compare error is detected. Select yes or no and press the Enter. The following message will

appear.

Detail status display (1:no,2:yes) ?

5. This message is used to select whether to display the detail status on the screen or not. The detail status are described in section 3.16. Select yes or no and press the Enter.

Page 3-31

6. During the hard disk test, the message shown below will appear. The ADDRESS number indicates that the first XXX

shows a cylinder number, the fourth X shows a head

number,

and the last XX shows a sector number. The STATUS number indicates that the first X shows a drive number and the

last

XX shows an error status code.

HARD DISK TEST XXXXXXX

SUB-TEST : XX

PASS COUNT : XXXXX ERROR COUNT : XXXXX WRITE DATA : XX READ DATA : XX ADDRESS : XXXXXX STATUS : XXX

CONTENTS

Subtest 01

Sequential read

This subtest performs forward reading of contents from track 0 to Max. track and then performs reverse reading of the contents from Max. track to track 0.

Subtest 02 Address uniqueness

 Selecting this subtest, the following message will appear.

Read sequential select ?

- 1: Forward sequential
- 2: Reverse sequential
- 3: Random
- 2. Select one of the above and press the Enter.

This subtest writes the address data that is different sector by sector at each track, then reads and compares it to the original data. This test is done for all tracks.

Subtest 03 Random address/data

This subtest writes random data to random addresses (cylinder, head, sector) and then reads the data out and compares it to the original data.

Page 3-32

Subtest 04 Cross talk & peak shift

This subtest writes the eight types of worst pattern data (shown below) to cylinders then reads the data while shifting cylinder by cylinder.

Worst pattern data

- 1. B5ADAD
- 2. 4A5252
- 3. EB6DB6
- 4. 149249
- 5. 63B63B

- 6. 9C49C4
- 7. 2DB6DB
- 8. D24924

Subtest 05 Write/Read/Compare (CE)

This subtest writes B5ADAD worst pattern data to the CE cylinder and then reads the data out and compares it with the original data.

Subtest 06 Write specified address

This subtest writes specified data to a specified cylinder and head.

Subtest 07 Read specified address

This subtest reads data which has been written to a specified cylinder and head.

Subtest 08 ECC circuit (CE cylinder)

This subtest checks the ECC (Error check and correction) circuit functions to a specified cylinder and head.

test 09 Sequential write

This subtest writes specified data of the two bytes to all cylinder.

stest 10 W-R-C specified address

This subtest writes specified data to the specified cylinder and head, then read and compare with original data.

MODEL:T1600 Backlit

Page 3-33

3.12 REAL TIMER TEST

Subtest 01 Real time

A new date and time can be input during this subtest when the current date and time are displayed.

Operations for the test are as follows.

1. Selecting the subtest, the following message will appear.

REAL TIME TEST 901000

Current data: XX-XX-XXXX Current time: XX:XX:XX

Enter new date:

PRESS [ENTER] KEY TO EXIT TEST

- If current date is not correct, input the current new date. Press the Enter, the enter new time: message will appear.
- 3. If current time is not correct, input the current new time. Press the Enter, return to the subtest menu of the REAL TIME TEST.

Subtest 02 Real time carry

CAUTION: When this test is executed, the current date and time is erased.

This subtest checks whether the real time clock increments the time displayed correctly (month, day, year, hour, minute, second).

MODEL:T1600 Backlit

Page 3-34

3.13 NDP TEST

CAUTION: This test cannot be run if there is no NDP mounted on the system BOARD.

Subtest 01 NDP test

This subtest checks the control word, status word, bus, and addition/multiplication functions.

MODEL:T1600 Backlit

Page 3-34

3.14 EXPANSION UNIT TEST

NOTE: If there is no expansion unit connected to the system, this test cannot be executed.

Subtest 01 Box wrap around (8 bits bus)

NOTE: As this subtest required a special tool to

be executed, it cannot be carried out here.

Subtest 02 Box mono video ram

NOTE: If there is no monochrome display card in the expansion unit, this test cannot be executed.

This subtest writes data (FF, AA, 55, 00H) into the monochrome display memory (B0000H to BOF9FH), then reads the data out and compares it with the original data.

Subtest 03 Wrap around test (16 bit bus)

NOTE: As this subtest requires a special tool to be executed, it cannot be carried out here.

MODEL:T1600 Backlit

3.16 HARD DISK TEST DETAIL STATUS

When an error occurs on the hard disk test, the following message will appear.

HDC status = XXXXXXXX

Detailed status of the hard disk test error is shown on the screen by eight-unit number. The first XXXX is error status and the last XXXX is not used.

Error status is composed of 2 bytes; the first byte shows the contents of the HDC status register in hexadecimal form and the other the error register of the HDC.

These contents are described in the table 3-5 and 3-6.

TABLE 3-5 HDC Status Register Contents

Page 3-39

3.17 HARD DISK FORMAT

There are two types of hard disk formatting:

- 1. Physical formatting
- 2. Logical formatting

This program is for physical formatting of the hard disk; it can

execute the following items.

- 1. All track FORMAT
- 2. Good track FORMAT
- 3. Bad track FORMAT
- 4. Bad track CHECK

CAUTION: The contents of the hard disk will be erased when this program is run. Before running the program, transfer the contents of the hard disk on to a floppy disk. This can be done with the MS-DOS BACKUP command. (See the MS-DOS manual for details.)

3.17.1 Program description

1. All track FORMAT

Performs physical formatting of hard disk in the manner shown below.

Sector sequences: 3

Cylinders: 0 to 614
Heads: 0 to 3
Sectors: 1 to 16

Sector length: 512 bytes per sector

Bad track: MAX. 20 tracks

2. Good track FORMAT

Executes the formatting of a specified cylinder and track as a good track.

3. Bad track FORMAT

Executes the formatting of a specified cylinder and track as a bad track.

4. Bad track CHECK

Checks for bad tracks by performing a read operation for all tracks on the hard disk; a list of bad tracks is then displayed

Page 3-40

Operations

CAUTION: After physical formatting is finished, enter the MS-DOS FDISK command, which will set the partition. Then enter the MS-DOS FORMAT command. (See the MS-DOS manual for details.)

1. After pressing 2 and Enter in the DIAGNOSTICS MENU, the following display will appear.

DIAGNOSTIC - HARD DISK FORMAT V2.00

- i All track FORMAT
- 2 Good track FORMAT
- 3 Bad track FORMAT
- 4 Bad track CHECK
- 9 Exit to DIAGNOSTICS MENU

Press [NUMBER] key ?

- 2. All track FORMAT Selection
 - (1) When all track FORMAT(1) is selected, the following message will appear.

Drive number select (1:#1, 2:#2) ?

(2) Select a drive number. Type the drive number and press Enter. The following message will appear.

Interleave number (3/1-3) ?

(3) Select an interleave number. (Usually select 3.)

Type

the number and press Enter. The following display

will

appear.

[HDD TYPE]: CYLINDER = XXX [HDD TYPE]: HEAD = X [HDD TYPE]: SECTOR = XX

[WARNING: Current DISK data will be completely destroyed]

(4) After pressing the Enter, the [[cylinder, head = XXX
 X]] message will appear; then all cylinders of the hard
 disk are formatted and checked.

Page 3-41

- (5) After formatting the hard disk, the Format complete message will then appear.
- (6) Press the Enter to return to the HARD DISK FORMAT menu.
- 3. Good track FORMAT or Bad track FORMAT Selection
 - (1) When Good track FORMAT or Bad track FORMAT is selected, the following message will appear.

Drive number select (1:#1, 2:#2) ?

(2) Select a drive number. Type the drive number and press Enter. The following message will appear.

Interleave number (3/1-3) ?

(3) Select an interleave number. (Usually select 3.) Type the number and press Enter. The following message will appear.

[HDD TYPE] : CYLINDER = XXX

[HDD TYPE] : HEAD = X [HDD TYPE] : SECTOR = XX

Press [track number (CCCH)] key ?

- (4) Type a track number (four digits) and press Enter. (The first three digits are the cylinder number and the last digit is the head number.) This executes the formatting of good tracks or bad tracks.
- NOTE: This program can format only one track per operation. If it is desired to format several good tracks or bad tracks, repeat the operation as many times as necessary.
- (5) After formatting the track of the hard disk, the Format complete message will appear.
- (6) Press the Enter to return to the HARD DISK FORMAT menu.

Page 3-42

- 4. Bad track CHECK Selection
 - (1) When Bad track CHECK is selected, the following message will appear.

Drive number select (1:#1, 2:#2) ?

(2) Select a drive number. Type the drive number and press Enter. The following message will appear.

Interleave number (3/1-3) ?

(3) Select an interleave number. (Usually select 3.) Type the number and press Enter. When the following message appears, and bad tracks of the hard disk are checked.

[HDD TYPE]: CYLINDER = XXX [HDD TYPE]: HEAD = X [HDD TYPE]: SECTOR = XX

[[cylinder, head = XXX XX]]

- (4) After checking the bad tracks of the hard disk, the Format complete message will appear.
- (5) Press the Enter to return to the HARD DISK FORMAT menu.

MODEL:T1600 Backlit

Page 3-43

3.18.1 Program description

This program executes head loading and seek/read operations for head cleaning. A cleaning kit is necessary for cleaning the FDD head.

3.18.2 Operations

1. After pressing 4 and Enter in the DIAGNOSTICS MENU, the following message will appear.

DIAGNOSTIC FLOPPY DISK HEAD CLEANING: VX.XX

Mount cleaning disk(s) on drive(s). Press any key when ready.

- After above message appears, remove the Diagnostics disk, insert the cleaning disk, and press any key.
- 3. When the Cleaning start message appears, FDD head cleaning will begin.
- 4. When cleaning is finished, the display automatically returns to the DIAGNOSTICS MENU.

MODEL:T1600 Backlit

Page 3-44

3.19 LOG UTILITIES

3.19.1 Program description

This program logs error information generated, while a test is in progress; the information is stored in the RAM. However if the POWER switch is turned off the error information will be lost. The error information itself is displayed as the following.

- 1. Error count (CNT)
- 2. Test name (TEST)
- 3. Subtest number (NAME)
- 4. Pass count (PASS)
- 5. Error status (STS)
- 6. Address (FDD, HDD 1 or memory; ADDR)
- 7. Write data (WD)
- 8. Read data (RD)
- 9. Error status name

This program can store data on a floppy disk or output information to a printer.

Page 3-45

3.19.2 Operations

1. After pressing 5 and Enter in the DIAGNOSTICS MENU, the error information logged in the RAM or on the floppy disk is displayed as shown below.

Figure

- 2. Error information displayed on the screen can be manipulated with the following key operation.
 - The 1 key scrolls the display to the next page.
 - The 2 key scrolls the display to the previous page.
 - The 3 key returns the display to the DIAGNOSTIC MENU.
 - The 4 key erases all error log information in RAM.
 - The 5 key outputs error log information to a printer.
 - The 6 key reads log information from a floppy disk.
 - The 7 key writes log information to a floppy disk.

MODEL:T1600 Backlit

Page 3-46

3.20 RUNNING TEST

3.20.1 Program description

This program automatically runs the following tests in sequence.

- 1. System test (subtest number 01)
- 2. Memory test (subtest number 01, 02, 03, 04, 06)
- 3. Display test (subtest number 01 to 08)
- 4. FDD test (subtest number 02)
- 5. Printer test (subtest number 03)
- 6. Async test (subtest number 01)
- 7. HDD test (subtest number 01, 05)
- 8. Real timer (subtest number 02)

When running an FDD test, this system automatically decides whether there are one or two FDDs.

3.20.2 Operations

CAUTION: Do not forget to load a work disk. If a work disk is not loaded, an error will be generated during FDD testing.

- Remove the diagnostics disk and insert the work disk into the floppy disk drive.
- 2. After pressing 6 and Enter in the DIAGNOSTIC MENU, the following message will appear.

Printer wrap around test (Y/N)

3. Select whether to execute the printer wraparound test (Yes)

or not (No). Type Y or N and press Enter. (If Y is

selected,

a wraparound connector must be connected to the printer connector on the back of the unit.) The following message will appear.

Async#1 wrap around test (Y/N) Async#2 wrap around test (Y/N)

4. Select whether to execute the test (Yes) or not (No).

Type Y

or N and press Enter. (If Y is selected, an RS-232-C wraparound connector must be connected to the SER. A OR

SER.

B connector on the back of the unit.)

5. This program is repeated continuously. To stop the program,

press Ctrl + Break.

MODEL:T1600 Backlit

Page 3-47

3.21 FDD UTILITIES

3.21.1 Program description

These programs format and copy floppy disks, and display dump list for both the FDD and the HDD.

1. FORMAT

CAUTION: The program is for only floppy disk drive test. The program is different the MS-DOS FORMAT command.

This program can format floppy disk (5.25-inch/3.5-inch) as follows.

- (1) 2D:Double-sided, double-density, 48/67.5 TPI, MFM mode, 512 bytes, 9 sectors/track.
- (2) 2DD:Double-sided, double-density, double-track, 96/135 TPI, MFM mode, 512 bytes, 9 sectors/track.
- (3) 2HD:Double-sided, high-density, double-track, 96/135 TPI, MFM mode, 512 bytes, 18 sectors/track.

2. COPY

This program copies from sours floppy disk to target floppy disk.

3. DUMP

This program displays the contents of floppy disks (both 3.5" and

- 5.25") and hard disk (designated sectors).
- 3.21.2 Operations
- 1. After pressing 7 and Enter key in the DIAGNOSTICS MENU, the following display will appear before program execution.

[FDD UTILITIES]

- 1: FORMAT
- 2: COPY
- 3: DUMP
- 4: EXIT TO DIAGNOSTICS MENU

PRESS [1] - [9] KEY

Page 3-48

2. FORMAT Selection

number and

(1) When FORMAT is selected, the following message appears.

```
DIAGNOSTICS - FORMAT(V1.00)
Drive number select ( i:A, 2:B) ?
```

(2) Select a drive number. Type the number and the following message will then appear.

Type select (0:2DD-2DD, I:2D-2DD, 2:2D-2HD, 3:2HD-2HD) ?

(3) Select a media-drive type number. Type the the message similar to the below will appear.

Warning: Disk data will be destroyed.

Insert work disk in to drive A: Press any key when ready.

(4) Remove the diagnostics disk from the FDD and insert the work disk; press any key.

The following message will appear: formatting is then

The following message will appear; formatting is then executed.

[FDD TYPE] : TRACK = XXX [FDD TYPE] : HEAD = X [FDD TYPE] : SECTOR = XX

Format start

[[track, head = XXXX]]

After the floppy disk is formatted, the following message will appear.

Format complete
Another format (1:Yes/2:No) ?

(5) If you type 1 and press Enter key, the display will return to the message in (3) above. If you type 2 the

display will return to the DIAGNOSTICS MENU.

Page 3-49

3. COPY Selection

The

(1) When COPY is selected, the following message will appear.

DIAGNOSTICS - COPY
Type select (0:2DD-2DD, 12D-2D,2:2D-2HD,3:2HD-2HD) ?

(2) Select a media/drive type number. Type the number. following message will then appear.

Insert source disk into drive A: Press any key when ready.

(3) Remove the diagnostics disk from the FDD and insert the source disk; press any key. The following message will appear, then start the copy to memory.

[FDD TYPE]: TRACK = XXX [FDD TYPE]: HEAD = X [FDD TYPE]: SECTOR = XX

Copy start

[[track, head = XXXXX]]

(4) Remove the source disk from the FDD and insert the work disk (formatted); press any key. The [[track, head = XXX X]] message will appear, then start the copy to work disk. When coping cannot be done with one operation, message (2) is displayed again. Repeat the operation. After the floppy disk has been copied, the following message will appear.

Copy complete
Another copy (1:Yes/2:No) ?

(5) If you type I the display will return to the message in (1) above. If you type 2 the display will return to the DIAGNOSTICS MENU.

Page 3-50

4. DUMP Selection

(1) When dump is selected, the following message will appear.

[HDD&FLOPPY DISK DATA DUMP] format type select (0:2DD, i:2D,2:2HD,3:HDD) ?

(2) Select a format type number. Type the number. If 3 is selected, the dump lists for the hard disk are

displayed automatically.

- 0: Display a dump list for a floppy disk (2DD)
- 1: Display a dump list for a floppy disk (2D).
- 2: Display a dump list for a floppy disk (2HD).
- 3: Displays a dump list for a hard disk.
- (3) If 0, 1, or 2 is selected, the following message will appear. If 3 is selected, the dump list will appear.

Select FDD number (i:A/2:B) ?

(4) Select an FDD drive number; the following message will then appear.

Insert target disk into drive A: Press any key when ready.

- (5) Remove the diagnostics disk from the FDD and insert a source disk; press any key. The Track number ?? message will then appear. Type the track number and press Enter.
- (6) The Head number ? message will then appear. Type the head number and press Enter.
- (7) The Sector number ?? message will then appear. Type the sector number and press Enter. The dump list for the floppy disk will be displayed.
- (8) After a dump list appears on the screen, the Press number key (1:up, 2:down, 3:end) ? message will appear.
 - 1. Displays the next sector dump.
 - 2. Displays a previous sector dump.
 - 3. Displays the following message.

Another dump (1:Yes/2:No) ?

(9) If you type 1 the display will return to the message shown after (4) above. If you type 2 the display will return to the DIAGNOSTICS MENU.

Page 3-51

3.22 SYSTEM CONFIGURATION

3.22.1 Program description

This program displays the following system configuration.

- 1. BIOS ROM VERSION = VX.XX
- 2. Base memory size

- 3. Display type
- 4. A number of floppy disk drives
- 5. A number of async ports
- 6. A number of hard disk drives
- 7. A number of printer ports
- 8. Extended memory size
- 9. Co-processor presents or not

3.22.2 Operations

After pressing 8 and Enter key to select from the DIAGNOSTICS MENU, the following display will appear.

SYSTEM CONFIGURATION

- *- BIOS ROM VERSION = X.XX
- *- 640KBMEMORY
- *- COLOR/GRAPH (80 column)
- *- I FLOPPY DISK DRIVE(S)
- *- 2 ASYNCADAPTER(S)
- *- i HARD DISK DRIVE(S)
- *- I PRINTERADAPTER(S)
- *- 0 MATH CO-PROCESSOR
- *- 0000KB EXTENDED MEMORY

PRESS [ENTER] KEY

Press Enter key to return to the DIAGNOSTICS MENU.

4.1 GENERAL

This section gives a detailed description of the procedures for removing and replacing FRUs (field replaceable units).

FRUs are listed as follows:

- 1. Keyboard
- 2. Top cover
- 3. Speaker
- 4. CPU board
- 5. Memory board
- 6. Hard disk drive (HDD)
- 7. LED board
- 8. DC IN indicator board
- 9. Power supply board
- 10. Sub battery
- 11. HDD adapter board
- 12. Floppy disk drive (FDD)
- 13. System board
- 14. LCD module
- 15. LCD cable
- 16. Handle
- 17. EL power supply board
- 18. LCD cable unit

The following points must be kept in mind:

- The system should never be disassembled unless there is a problem (abnormal operation, etc.)
- 2. Only approved tools may be used.
- 3. After deciding the purpose of replacing the unit, and the procedures required, do not carry out any other procedures which are not absolutely necessary.
- 4. Be sure to turn the POWER switch off before beginning.
- 5. Be sure to disconnect the AC adapter and all external cables from the system.
- 6. Follow the only fixed, standard procedures.
- 7. After replacing a unit, confirm that the system is operating normally.
- 8. Be sure not to be wounded by thin steel plate.

Tools needed for unit replacement:

1. Phillips head screwdriver

MODEL:T1600 Backlit

Page 4-2

4.2 REMOVING/REPLACING THE KEYBOARD

- 1. Remove the AC adapter from the unit.
- 2. Turn the unit upside down and remove the two battery packs (A).

Figure 4-1 Removing the Battery Packs

3. Remove the three screws (B) from the bottom cover.

Figure 4-2 Removing the three Screws

Page 4-3

- 4. Turn the unit back over then open the display.
- 5. Lift up the front edge of the keyboard unit and place it front of the computer. At this time, you can not discount the keyboard cable yet.
- 6. Remove the three screws (C) to remove the shield plate (D) for CPU board.
- 7. Release the pressure plate (E) of the PJ1 keyboard I/F connector (F) to disconnect the keyboard cable (G) from the system board (H) .

Figure 4-3 Removing the keyboard Unit

Page 4-4

8. Unlatch the four latches (I) of the keyboard bracket, then pull out the keyboard (J).

Figure 4-4 Removing the keyboard

9. To install the keyboard, follow the above procedures in reverse.

CAUTION: When insert the shield plate, you must fix the assembly with correct screws marked in figure 4-3. If you use the wrong screw, it will damage the system unit.

MODEL:T1600 Backlit

Page 4-5

- 4.3 REMOVING/REPLACING THE TOP COVER
- 1. Remove the AC adapter from the unit.
- Turn the unit upside down, then set up the stand (A) and remove it.
- 3. Remove the two screws (B) from the bottom cover.

Figure 4-5 Removing the five Screws

Page 4-6

4. Turn the unit back over and remove the display so that it is

perpendicular to system unit.

CAUTION: Pulling out the internal display when it is not perpendicular to the system unit will damage the display. Excessive removal and replacement of the display will prematurely wear its connects.

Figure 4-6 Removing the LCD

Page 4-7

- 5. Remove the keyboard as directed in section 4.2, and remove the five screws (C).
- 6. Disconnect the display I/F connector (D) from the PJ3 system board, and take off the latch (E) of the top cover from the, to remove the top cover. Also keyboard bridge (F) is removed.

Figure 4-7 Removing the Top Cover

7. To install the top cover, follow the above procedures in reverse.

NOTE: Confirm that the top cover is locked into the bottom cover with the latch. Insert the shield plate for memory board between the top cover and keyboard bridge.

MODEL:T1600 Backlit

Page 4-8

4.4 REMOVING/REPLACING THE CPU BOARD

- 1. Remove the keyboard unit as directed in section 4.2 and remove the five screws (A), then remove the keyboard bridge (B).
- 2. CPU board is fixed by two connectors which one connector is located front of it and the other connector is located back of it. If the optional memory board(S) is installed, remove them as directed in section 4.16.
 - Unplug the CPU board connector (C) from the PJ2 system board.

NOTE: Make sure the flexible cable is not pinched when

replacing the CPU board.

Figure 4-8 Removing the CPU Board

5. To install the CPU board, follow the above procedures in reverse.

MODEL:T1600 Backlit

Page 4-9

- 4.5 REMOVING/REPLACING THE MEMORY BOARD AND SPEAKER
- 1. Remove the top cover and CPU board as directed in section 4.3 and 4.4.
- 2. Disconnect the speaker connector (A) from the PJ4 system board, to remove the speaker (B) from the speaker holder (c).

Figure 4-9 Removing the speaker

3. Remove the three screws (D), then remove the memory board (E) with shield plate (F) and speaker holder.

Figure 4-10 Removing the Memory board

Page 4-10

4. To remove the speaker holder and shield plate, release the three latches (G), then lift it up.

Figure 4-11 Removing the Speaker Holder and Shield Plate

5. To install the speaker and the memory board, follow the above procedures in reverse.

CAUTION: After replace the memory, insert the CPU board for avoiding the short-circuit of memory board and FDD support (G) .

MODEL:T1600 Backlit

Page 4-11

4.6 REMOVING/REPLACING THE HDD

CAUTION: If you can back up the contents of the hard disk, transfer the contents of the hard disk on to a floppy disk. This

can be done with the MS-DOS BACKUP command. (See the MS-DOS manual for details)

- 1. Remove the AC adapter from the system unit.
- 2. Remove the memory board as directed in section 4.5.
- 3. Remove the two screws (A) from modem case (B), and remove the modem case.

Figure 4-12 Removing the Modem Case

Page 4-12

- 4. Remove the memory board as directed in section 4.5 and remove the screw (D) from built-in modem socket (E).
- 5. Remove the DC IN indicator board (F), then remove the five screws (G) and pass the built-in modem sockey through the hole (H) of the HDD support (I).

Figure 4-13 Removing the Screws from HDD Support and removing the Built-in Modem Connector

Page 4-13

6. Lift up the HDD support, then disconnect the two cables (J) from the HDD (K) $\,$

Figure 4-14 Removing the HDD Support

7. Remove the three screws (L) from HDD support, then remove the HDD from the HDD support.

Figure 4-15 Removing the HDD

8. To install the HDD, follow the above procedures in reverse.

NOTE: When you install the HDD support on which you have fixed the HDD, the HDD cable should be at the power supply board side.

MODEL:T1600 Backlit

Page 4-14

- 4.7 REMOVING/REPLACING THE LED BOARD AND DC INDICATOR BOARD
 - 1. Remove the top cover as directed in section 4.3.
- 2. Disconnect the DC IN indicator connector (A) from the PJ6 power supply board, and remove the DC IN indicator board

(B)

from the board support (C).

3. Remove the screw (D), then release the pressure plate (E) of the PJ601 LED board connector (F) to disconnect the LED board cable (G) and remove LED board (H).

Figure 4-16 Removing the LED Board and DC IN Indicator Board

4. To install the LED board and DC IN indicator board, follow the above procedures in reverse.

MODEL:T1600 Backlit

Page 4-15

- 4.8 REMOVING/REPLACING THE POWER SUPPLY BOARD AND SUB BATTERY
- 1. Remove the HDD support as directed in section 4.6 and remove the four screws (A) from the power supply board (B).
- Disconnect the connector (C) from the PJ2 power supply board.

Figure 4-17 Removing the Screws from the Power Supply Board

Page 4-16

- 3. Lift up rear of power supply board, then disconnect the three cable (D) from the PJ3, 4, 5 power supply board.
- 4. Peel the tape (E), then remove the power supply board.
- 5. Remove the sub battery (F).

Figure 4-18 Removing the Power Supply Board and Sub Battery

To install the power supply board, follow the above procedures in reverse.

CAUTION: When inserting connector into PJ4, 5, the connector with red cable should be inserted into PJ4.

MODEL:T1600 Backlit

Page 4-17

- 4.9 REMOVING/REPLACING THE HDD ADAPTER BOARD AND FDD
- 1. Remove the power supply board as directed in section 4.8.

- 2. Remove the two screws (A) from the HDD adapter board (B), to remove the HDD adapter board.
- 3. Unplug the HDD adapter board from the PJ8 system board.
- 4. Release the pressure plate (C) of the PJ601 LED board connector (D) to disconnect the LED board cable (E).
- 5. Remove the two screws (F) from the expansion bus connector assembly (G), then unplug them from the PJ6 and PJ7 system board.

Figure 4-19 Removing the HDD Adapter Board

Page 4-18

6. Remove the three screws (H) and one nut (I) from the FDD support (J) and lift up the FDD support, then disconnect the FDD cable (K) from the PJ5 system board.

Figure 4-20 Removing the FDD Support

Page 4-19

7. Remove the four screws (L) from the FDD support, then take off the FDD (M) from the FDD support.

Figure 4-21 Removing the FDD

8. To install the HDD adapter board and FDD, follow the above procedures in reverse.

CAUTION: When you install the expansion bus connector assembly, you must fix the assembly with correct screws marked in figure 4-19. Also, install the FDD support with FDD, you fix it with correct screws marked in figure 4-20. If you use the wrong screw, it will damage the system

board.

MODEL:T1600 Backlit

Page 4-20

4.10 REMOVING/REPLACING THE SYSTEM BOARD

- 1. Remove the FDD support as directed in section 4.9.
- 2. Remove the four screws (A) and one nut (B) from the system board (C), and remove the system board.

Figure 4-22 Removing the System Board

 To install the system board, follow the above procedures in reverse. Page 4-21

4.11 REMOVING/REPLACING THE LCD MODULE AND LCD CONNECTOR

WARNING: High voltages are applied to the display. When you disassemble or assemble the display, be sure to remove the display from the system unit.

- 1. Remove the display unit.
- 2. Release the three latches (A) and five latches (H) of LCD cover (B), then unlatch the two latches (C) to remove the LCD mask (D).
- 3. Remove the four screws (E) and lift up the LCD module (F), then disconnect the five connectors (G) from the LCD module.

NOTE: Pull out the cable by its connector. Never disconnect it by pulling out the cable itself.

4. Remove the LCD module.

Figure 4-23 Removing the LCD Module

Page 4-22

- 5. Remove the two screws (H) from release plate block (I) and lift up the release plate block.
- 6. Remove the LCD connector (J).

Figure 4-24 Removing the LCD Connector

7. To install the LCD module and LCD connector, follow the above procedures in reverse.

MODEL:T1600 Backlit

Page 4-23

- 4.12 REMOVING/REPLACING THE VOLUME BOARD AND EL POWER SUPPLY BOARD
- 1. Remove the LCD module as directed in section 4.11.
- 2. Disconnect the three connector (A) from EL power

supply board (B) and remove the screw (C) from volume board (D), to lift up the volume board.

3. Remove the four screws with washer (E) from EL power supply board to remove the EL power supply board.

Figure 4-25 Removing the Volume Board and EL power supply

4. To install the volume board and EL power supply board, follow the above procedures in reverse.

CAUTION: When connect the volume board cable to EL power supply board, long connector cable should be connected to EL power supply board and short one should be connected to the LCD module respectively.

MODEL:T1600 Backlit

Page 4-24

4.13 REMOVING/REPLACING THE EL PANEL

- 1. Remove the LCD module as directed in section 4.11.
- 2. The EL panel is held in place by two fasteners (A). Each fastener consists of a pin (B) and a collar (C) as shown in the figure 4-33. Push up the tip of a pin, then using tweezers, pull out each pin from above.
- 3. The collars may come out when you pull out the pins, if not, push up the tip of each collar, then using tweezers, pull out each collar from above.

Figure 4-26 Fastener

Figure 4-27 Removing the Two Fasteners

Page 4-25

4. Pull out the EL panel (D) from the LCD module (E) .

Figure 4-28 Removing the EL Panel

5. To install a new EL panel, follow the above procedures in reverse.

NOTE: When installing the EL panel into the LCD module, be sure the orange side of the EL panel is facing up. When inserting a fastener, insert the inner collar, then insert the pin. Carefully press each pin until it snaps into place.

Page 4-26

4.14 REMOVING/REPLACING THE LCD CABLE UNIT

- 1. Remove the top cover as directed in section 4.3 and turn it upside down.
- 2. Remove the four screws (A) from hinge cover (B), to remove the hinge cover.
- Lift up the LCD cable unit (C) and remove the hinge block (D).

Figure 4-29 Removing the LCD Cable Unit

4. To install the LCD cable unit, follow the above procedures in reverse.

MODEL:T1600 Backlit

Page 4-27

4.15 REMOVING/REPLACING THE HANDLE

- 1. Remove the FDD as directed in section 4.9 and remove the two screws (A) from handle stopper (B).
- 2. Remove the shield (C) and handle stopper, to remove the handle (D).

Figure 4-30 Removing the Handle

 To install the handle, follow the above procedures in reverse.

NOTE: When you restore the shield, put the notch (E) into the hole (F) of the handle stopper. Then set (G) part to between handle stopper and battery case (H).

MODEL:T1600 Backlit

Page 4-28

4.16 REMOVING/REPLACING THE MEMORY EXPANSION CARD(S)

CAUTION: Sub battery keeps supplying to the computer's memory after the power is switched off, or you remove the AC adapter or main battery pack. Pay high attention not to short-circuit the exposed part of memory board and its flexible cable with the metal part of the computer, such as a screw hole or keyboard bridge.

- 1. Remove the keyboard unit and shield for CPU board as directed in section 4.2.
- 2. Remove the screw (A) from memory expansion card (B) of upper, then unplug the upper socket (C) to remove the memory expansion card of upper.

Figure 4-31 Removing the memory expansion card of upper

Page 4-29

3. Remove the screw (D) from memory expansion card (E) of lower, then unplug the lower socket (F) to remove the memory expansion card of lower.

Figure 4-32 Removing the memory expansion card of lower

4. To install the memory expansion card(S), follow the above procedures in reverse.
